

Logosol has one of the widest range of moulding knives for planers/moulders on the market. Now it will be even broader, with new cutter heads and knives for planing compact and resinous hardwood. The inspiration comes from the USA, where the Logosol planers are used professionally for moulding hardwood of all sorts.

New! Cutter heads and knives for *Hardwood*

- The planers/moulders are optimized for Scandinavian conditions, Logosol's Managing Director, Bengt-Olov Byst-röm, explains.

Here, mostly spruce and pine are planed, both good sorts of wood which in disparaging terms are called softwood by the Americans. The generic term for wood from broadleaved trees is hardwood. Scandinavian customers know that Logosol's planers/moulders excellently plane oak and elm, as well as birch and maple.

Different for hard and soft stuff

The difference is that many American customers exclusively plane hardwood when planing professionally. For this purpose there are better alternatives than the HSS knives Logosol offers. HSS means high-speed steel. There are different alloys of HSS. Logosol's moulding knives are of 6 % cobalt. For harder sorts of wood it is better with three times as much cobalt. So, why not change the metal mixture in all moulding knives?

- The more cobalt, the harder and more brittle the knives become. For

pine and spruce the old knives work better as they are more tough, Bengt-Olov explains.

New cutters

Brittle metal also calls for knives that are thicker in order to stand the same amount of strain. Today our knives are 4 mm (approx. 0.16 inches) thick. The new ones will be 5.5 mm (approx. 0.22 inches) which, in turn, require new cutter heads.

To solve this problem, Logosol's partner, Toolbox, has developed larger side cutters with knife clamping gibs that fit both types of knives. In addition, the new cutter heads are higher in order to support the entire moulding knife.

- The new cutter heads and knives meet the demands of pros when it comes to planing harder sorts of wood, Bengt-Olov says.

When planing spruce and pine Logosol recommends the old cutter heads and knives. They work better on softwood. The new knives are recommended when planing a lot of oak and similar sorts of wood.

Welcome to the Planer-revolution!

Our revolutionary planers bring out the panels from the boards. Refining the wood increases the value of the timber fourfold and gives you opportunity both to sell finished strips, trims, panels, skirting boards and to realize new projects.

A wide range of profiles!

Logosol PH260 can handle everything from log cabin timber to picture frames. You can choose from a wide range of standard profile knives or order your own custom-made profile knives. Both standard and specially designed profile knives are at reasonable prices.

Get our catalog of moulding knives that includes tongue and groove, baseboard, and crown-moulding applications for the moulder.

One year warranty and unlimited support

One year warranty

Logosol provides a one-year warranty on our machines: the Logosol Sawmill, the Timberjig, the Bandsaw, the Electric Chainsaws, the Log House Moulder, the Petrol Chainsaws and all our Planers/Moulders. The warranty covers breakdown or malfunction due to manufacturing defects. The warranty also covers defects that may occur under normal use of our products, with the exception of consumable items such as belts, guide bars and saw chains.

Unlimited Support

We provide our customers with unlimited support. At our headquarters in Sweden, we are prepared to offer Logosol customers our 15-year experience in designing and working directly with Logosol equipment. We will give the consultation in English via telephone or e-mail. Tel: +46-611-18285; e-mail: info@logosol.se

Chip Extractor 3 kW

Chip extractor suitable for PH260. 2500 m³ / hour. Inlet 4x100 mm, outlet 200 mm. 400 V.

Art. no. 7000-000-2030

£705

exc. VAT and delivery

Castor Set

4 turnable and lockable double castors. Diameter 75 mm. Fits all of Logosol's planers/moulders.

Art.no: 7500-000-1025

£45

exc. VAT and delivery

Feeding Table

These polished steel tables provide excellent support for long pieces of stock moving through the planer.
